Abstract

This document describes manuscript formatting requirement for CCSC conferences. Authors can use this document as a template to format their papers.

Length

Prepare the paper for written understanding with length approximately six (6) single spaced pages including tables, figures, and a list of references or bibliography.

Style

Write clearly and simply in the third person for an audience that is well-grounded in computing, but who may have limited exposure or knowledge

*Copyright ©2018 by the Consortium for Computing Sciences in Colleges. Permission to copy without fee all or part of this material is granted provided that the copies are not made or distributed for direct commercial advantage, the CCSC copyright notice and the title of the publication and its date appear, and notice is given that copying is by permission of the Consortium for Computing Sciences in Colleges. To copy otherwise, or to republish, requires a fee and/or specific permission.

about the specific topic of your paper. Define any technical terms deemed to require clarification when they are introduced.

Title and Author Information

Please follow the example in this paper to typeset title and author information.

Body of the Manuscript

The text may be organized into sections and subsections. Please use `\section` and `\subsection` commands to define them as show in this example paper. Latex will take care of the formatting. If you opt to number your sections and subsections, do so specifically using Arabic numbers.

1 Abstract

Provide a one paragraph brief overview of the paper in both the manuscript for review and in the final manuscript for publication.

2 Citation

Appropriately cite all references to other published works included in the paper. `biblatex` is used to create a list of references or bibliography as the last section in the paper. Here are citation examples for a book[2], a journal paper[1], a website[3], and a conference proceeding paper[4].

3 Tables and Figures

Include all tables and figures within the body of the text. (Provide as separate files in the original format any figures so that if there are problems with the figures coming into the final manuscript there are alternatives available to the editors.)

Here is an example Table 1.

Here is an example Figure 1.

Table 1: Nonlinear Model Results			
Case	Method#1	Method#2	Method#3
1	50	837	970
2	47	877	230
3	31	25	415
4	35	144	2356
5	45	300	556

Figure 1: The Universe

4 Reference List

The `\printbibliography` command prints a list of referneces for you. Please use `sample.bib` as an example to create your bibliography entries.

Additional Information

Please feel free to email `ccsc-editors@googlegroups.com` for questions.
